

COLOURCRAFT

Colours & Adhesives Ltd

UK MANUFACTURER

SUNPRINTING

- A range of pre-treated products for creating easy print designs in the sun (no mess)
- All fabric is pre-washed (no shrinking)
- Printing can be carried out on both sides of fabric and paper (economical)
- Simply print in the sun and rinse in water
- Non-toxic Archival Environmentally friendly

Instructions:

- Choose design for Sunprint - computer print, negative, leaves, flowers, buttons and other found objects etc
- Remove the Sunprint paper/fabric from the UV protective bag where the sun's light cannot reach it - either in outdoor shade or a dimly lit room. This prevents slow exposure of the paper before printing
- Place design directly on top of the Sunprint paper/fabric.
- When taking prints of flat/almost flat objects, secure with glass. This helps give a sharper image by preventing sunlight from going underneath the edges
- Place in the sun for 5 - 20 minutes - the exposed areas will fade from blue to white
- On a cloudy day, expose the print for a little longer until the same process takes place
- If required, turn the print over and expose the other side
- Remove the design from the Sunprint paper/fabric
- Rinse the Sunprint with water until the water runs clear (1-5 mins) the longer it is left in water, the deeper blue it will go
- To heat set - either iron well with a warm dry iron or tumble dry

Units 5 & 6, 555-557 Carlisle Street East, Sheffield, S4 8DT

HINTS & TIPS

- Leaving to dry on paper/cardboard/paper towel avoids formation of water spots
- For yellow results rather than the traditional cyan coloured print, try washing the finished design in a laundry detergent containing phosphate.
- Also, for additional colours – see our range of coloured cotton fabrics
- With the exception of the above-mentioned process for obtaining a yellow shade, Sunprints should be washed in a non-phosphate laundry detergent

SUNPRINTING ON FABRIC
